SUMMARY

Full-stack engineer with 6+ years building and operating production systems across fintech, large-scale e-commerce (3.5M DAU), and enterprise platforms. Strong in React/TypeScript frontends and Node.js/Java backends, with experience designing APIs, owning features end-to-end, and improving system reliability and operational efficiency in fast-moving environments.

EXPERIENCE

Software Engineer | Coinbits

January 2024 - October 2025, Remote

- Built end-to-end features for a Bitcoin exchange serving 20K daily users, including a spending analytics dashboard and real-time portfolio monitoring tools.
- Redesigned user onboarding to resolve cross-system data consistency issues, reducing support tickets by 100+ per month and eliminating manual database interventions.
- Implemented rate-limited validation with background job processing to prevent invalid state propagation across downstream services, improving API resilience.
- Led cross-functional redesign of the internal admin dashboard; partnered with PM to identify UX gaps and shipped intuitive controls that reduced developer support requests by 60%.

Software Engineer | Lumen Technologies

April 2021 - December 2023, Remote

- Built internal productivity applications supporting 30K+ employees across network operations, customer service, and telecom provisioning, with highest-traffic tools handling ~3K requests daily.
- Developed RPA-integrated automation tools that eliminated manual Excel workflows, reducing task completion time from hours to minutes and saving hundreds of thousands in operational costs.
- Engineered full-stack features using Java/Spring Boot and Oracle SQL, designing RESTful APIs, implementing MVC architecture, and enforcing role-based access control for multi-tenant platforms.
- Owned DevOps workflows including Kubernetes/Docker deployments, Jenkins CI/CD pipelines, uptime monitoring, and onboarding for 10+ engineers.

Software Engineer | Macy's Technologies

September 2021 - January 2023, Remote

- Developed product recommendation features for macys.com and bloomingdales.com serving 3.5M daily active users.
- Built and integrated “Recently Viewed,” “Recommended,” and “Frequently Bought Together” carousels across PDPs, search, homepage, and checkout.
- Collaborated cross-functionally across domains with the PROS (Product Recommendations) team to deliver personalization features that improved engagement across multiple customer touchpoints.

Front End Engineer | CenturyLink

September 2018 - April 2021, Denver, CO

- Architected a modular component library (15–20 reusable React components) adopted as team standard, accelerating feature development across internal tooling used by 20K users.
 - Improved application performance through modularization and DRY principles, enabling rapid rollout of similar use cases across business units.
 - Delivered cross-browser compatibility (including legacy IE support) and responsive tablet-friendly designs with accessibility features (ARIA labels, WCAG compliance).
-

SKILLS

Languages & Frameworks: TypeScript, JavaScript, Node.js (Express), Java (Spring Boot), Python (Flask), React, Next.js

API & Backend: RESTful APIs, HTTP methods, GraphQL, SQL, NoSQL, Elasticsearch, Redis, Supabase

Cloud & DevOps: Git, AWS, Docker, CI/CD, Jenkins, Kubernetes, WebHooks

PROJECT

Open-Source Work | Bitcoin Ecosystem

- **StratumV2** - contributed media hub feature to website with embedded media (podcasts, articles, and educational content); refined VuePress UI components and documented setup for future maintainers.
 - **Bitcoin.org** - Led 6-week process to add SeedSigner hardware wallet to official documentation, coordinating between project maintainer and Bitcoin.org reviewers to meet specs for image optimization, feature flags (secure element, multisig support), and compliance guidelines.
 - Collaborated with maintainers to refine UI behavior, interaction flows, and visual feedback to improve clarity and usability for end users.
-
